

Drupal: Unpublish (Archive) a Page

Unpublishing a Drupal page will hide it from the public until it is published again. You may use the following steps to archive a web page that do not need to be displayed to the public, but you want to retain the content for future reference.

Step-by-step guide

1. After signing into Drupal, visit the page that you want to unpublish.
2. Click the Action link: **"Unpublish this revision"** and **confirm the change** on the next screen that appears. This will remove the page from public view.

To republish the page, see: [Drupal: Edit and Publish a web page](#)
